

Hey, I'm Kerry!

I'm a UX researcher and strategist with 4+ years of experience helping teams understand people, untangle messy problems, and make better product, brand, and customer experience decisions.

My background spans federal digital services, consulting, and consumer research. Most recently, I worked as a qualitative researcher at Thursday Strategy, supporting research for clients across technology, travel, financial services, and consumer products, including Google, Chase, Air Canada, and PrizePicks. Before that, I was a Senior UX Researcher at Accenture Federal Services, where I led research for FAFSA experiences used by millions of students and families.

I'm at my best when research has a real decision to influence. I like asking thoughtful questions, finding the patterns hiding in messy data, and turning what I learn into clear, practical recommendations that teams can actually use. Whether I'm testing a high-stakes form, exploring how people respond to a new product concept, or understanding what makes a brand experience resonate, I'm always interested in the same thing: why people do what they do, and what teams should do with that knowledge.

I'm especially drawn to the spaces where UX research overlaps with product strategy, brand strategy, marketing, and experiential customer experience - how people discover, choose, use, trust, and build relationships with products, services, and places over time.

Outside of work, I'm usually exploring in some form: trying a new restaurant, going on a long walk, practicing yoga, planning a trip, or cooking with friends and family. I've always been a sucker for a great user or customer experience, whether that's a thoughtful hotel stay, a beautiful space, a welcoming

restaurant, or a small detail that makes something feel easier, warmer, or more memorable.

I'm looking for my next team in UX Research, Product Research, UX Strategy, or consumer insights - ideally somewhere curious, collaborative, supportive, and serious about building experiences people actually want to use.

Let's connect via [email](#) or on [LinkedIn](#).
